

EVALUATION

Understanding Your Impact With SafeSide

MEASURE YOUR IMPACT WITH SAFESIDE

Evaluation data to support planning, implementation, and continuous improvement.

Measure Your Impact

SafeSide training grew out of programs and studies conducted by Dr. Tony Pisani at the University of Rochester. Research on the approach is ongoing. We suggest metrics and provide data to assist our subscribers in measuring their impact and progress.

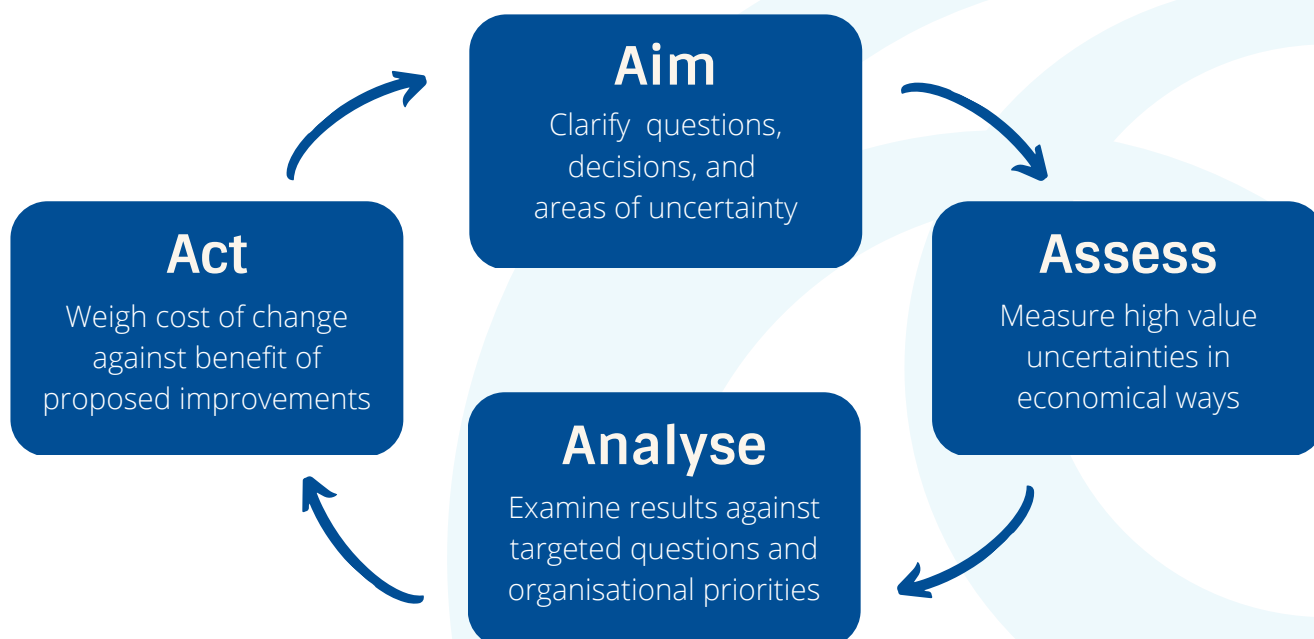

Standard program evaluation

All SafeSide partners receive a custom evaluation report that is updated in real time and accessible via web-link, so organisations can immediately begin understanding the impact of their suicide prevention efforts and ongoing needs for staff support.

In addition, we work with you to measure skill use with a quick **3x3 evaluation-3 questions, 3 times a year** focused on staff with at least 3 months of SafeSide experience.

Enhanced evaluation

For organisations seeking additional data to better understand specific staff or consumer outcomes, SafeSide's enhanced evaluation includes consultation to gain clarity about key questions and metrics, quarterly data review, and a package of reports and slides to help you share your impact with others.

SafeSide's Impact Model for suicide prevention

With both proximal and distal targets in view, SafeSide's Impact Model illustrates how your planning, implementation, and continuous improvement efforts lead to care delivery outcomes and impacts that support your staff and improve care. The standard program evaluation measures impact across and throughout every project.

SafeSide Framework & InPlace® Learning Impact Model for Suicide Prevention (v2.6)

Vision: Comprehensive, coordinated suicide prevention, in which teams within and across systems consistently connect, assess, respond, and extend care to those at risk and their families.

Goal: Reduce suicide actions and deaths and promote strength, recovery, and well-being.
