

## Video-Based Training for Suicide Prevention in Primary Care

A clear framework so your staff is ready and equipped to respond.

### A third of people who die by suicide visited primary care within a month of their death.

Suicide concerns can come up any time in primary care. Providers are eager to help, but training and clarity about how to respond are hard to come by. We've created a framework and training to change that.

#### SafeSide Primary CARE Training

Group video-based training with practical actions to take when a youth or adult patient may be thinking about suicide.

**Research-Based:** Builds upon modules evaluated in federally funded research at the University of Rochester (AHRQ, CDC).

**Demonstrations:** Real primary care professionals with youth and adult patient actors. Opportunities to discuss and apply to your setting/population.

**Flexible and Sustainable:** Learn on your schedule, three separate 50 minute sessions over lunch or one three hour session.

**Annual Subscription:** Participants have access to the SafeSide workshop, office hours, community of practice, tools and refreshers.

*Three AMA Category 1 CME credits available from the University of Rochester.*

#### Voice of the Patient

SafeSide Primary CARE is co-taught by primary care psychologist, Dr. Anthony R. Pisani and lived experience faculty, Kristina Mossgraber.

#### Practical Framework

- ✓ A memorable 'map' of best practices
- ✓ Tactics, tips, and tools that you can use immediately
- ✓ Organizes your thinking, planning, communication and documentation
